DA TARGETS

SELF-HEALING TARGET

User Guide

Color change · Paintable · Non color change

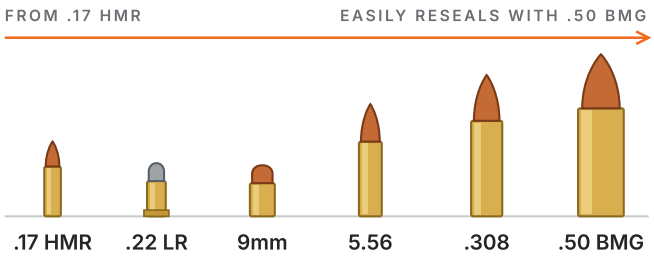

01 Color Change

COOL WEATHER 45–80°F	WARM WEATHER 60–100°F
	
Below 60°F ■ Black target / ● Red hits	**Below 80°F** ■ Black target / ● Red hits
Above 60°F ■ Red target / ● Yellow hits	**Above 80°F** ■ Red target / ● Yellow hits

Hits show instantly, then fade back in **30 sec to a couple minutes** (depends on temperature).

Non color change & paintable versions show hits by movement or through the paint.

02 Calibers

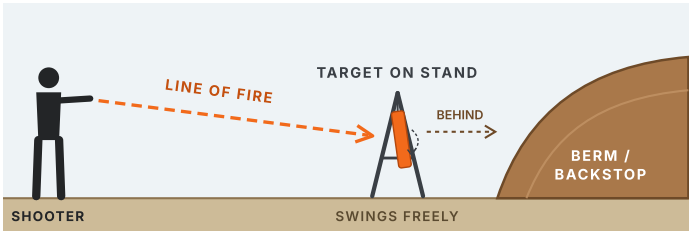

USE — **FMJ / ball ammo**, round or pointed tips. All common pistol & rifle calibers.

AVOID
- ✕ Hollow points
- ✕ Flat-tip & wadcutters
- ✕ Under 800 fps (BB, airsoft, paintball)

WARNING | **Color change targets: never mount against a hard surface.**
Plywood or any other hard backing will permanently damage the color change.

03 Mounting

01 Use a **sturdy stand or frame**.

02 Fasten through the **strap, mounting holes or base** with screws, staples or a clamp.

03 Let it **hang and swing freely**.

04 Put a **proper backstop or berm** behind it.

04 Storing

Store indoors	No direct sunlight	Still self-heals

- **Store indoors**, out of direct sunlight, when not in use.
- **UV light can degrade the material** over time.
- Faded color? The **self-healing target** and its hit reaction still work.

Safety: Always use a proper backstop and wear eye/ear protection.
